People**

**Communication &
Collaboration**

**Outstanding
Service**

We worked with our client, Dr. Laurel DeMaula, on updating the existing building and constructing an 855 SF addition for the Royersford Veterinary Hospital to better accommodate both their patients' and staff's growing needs. The expansion included three new exam rooms, a pharmacy, and a dental surgery area. We adjusted the cabinet layout and countertops to utilize the space more efficiently. New airflow and climate controls were added for better comfort and aeration throughout the facility.

The new addition blended well with the original building. A new roof, Hardie Board siding, windows, soffit, fascia, and gutter were added to the entire exterior of the building, giving the facility a fresh new look.

Even though there were unanticipated utility services and materials delays, we were still able to finish the project close to the anticipated schedule of completion. Our team of experienced professionals worked with Dr. DeMaula to achieve a comfortable space to provide comprehensive care for pet patients.

Pre-Construction Services

- Project Budgeting
- Scheduling and Coordination
- Supervision
- Code Compliance

Construction Services

- Demolition
- Site work
- Building addition/renovation
- All mechanicals
